## TATTOO CARE INSTRUCTIONS

These care instructions are necessary to let your tattoo heal well.

It is very important to follow each step. Only if you follow the steps, your tattoo will heal well and will bring you joy for a long time.

After your visit at the studio:

**After 3 days:** remove the tattoo foil, preferably under **lukewarm** water. Dissolve the film slowly and parallel to the skin, like a chewing gum.

For **the next week**, depending on the individual duration of the healing: There must always be a very thin layer of tattoo cream (which you get in the studio) on your tattoo – no crust may form.

Wash the tattoo **the first few days, as needed** with lukewarm water and PH-skin-neutral soap and gently pat dry with kitchen roll, then use tattoo cream again.

For **the next 2–6 weeks** (depending on the individual duration of the healing):

Do not cause friction on the tattoo (for example, due to rough clothing)

No swimming pool or bath in the tub, no long showers

No sauna

No sport (until the tattoo has skinned)

no UV radiation

After your tattoo has completely healed, you should always cream it with **SPF 50**, if you are exposed to solar radiation.
